

Primary Engineering Success moves into third year

Primary Engineer has started again at Darwen Vale High School and Engineering College and many young students from local Primary schools are taking part in this years challenge. The students are working with their primary school teachers and the teachers at Darwen Vale in order to design and make a wide variety of model vehicles. The KS1 challenge pupils (from the age of five) are involved in designing and making freewheeling vehicles with the aim of running in a straight line for as far as possible! The KS2 Challenge involves the students in designing and making a controllable vehicle that can also hill climb !

This is the third year of the project at Darwen Vale the specialist engineering college and the primary partner schools following great success in the two previous years. The children are all making excellent effort with their vehicle designs and we are all looking forward to the local finals of this years competition on Saturday 15th November !
